Design: Database

INVENTORY MANAGEMENT SYSTEM FOR MIDSTATES EQUIPMENT & SUPPPLY

DATABASE TECHNOLOGY

The database technology that I am using is Mongo. Mongo is a NoSQL database. I went with MongoDB because of its flexibility with structuring data, easy scaling, and speed.

DATA MODELING

INVENTORY

UML

Inventory (MVP)		
_id	int	
brand	string	
year	int	
hours	double	
condition	string	
serial	string	
price	double	
description	string	
image	binary	
created	timestampe	

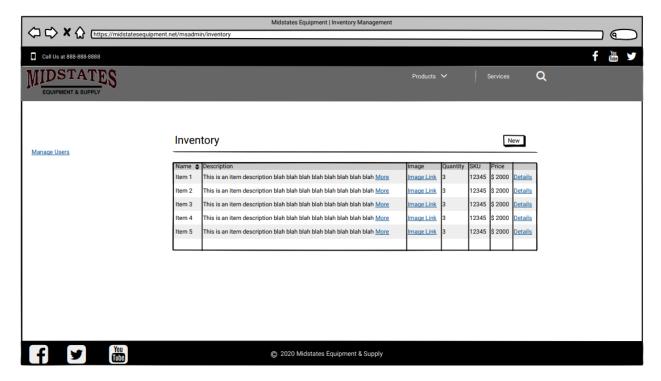

Example JSON Document

```
"_id": {
    "$oid": "5f04b2c276c77bbbdcb16730"
"
    },
    "brand": "New Brand",
    "year": 2020,
    "condition": "new",
    "serial": "12345",
    "price": 20.25,
    "description": "Some description",
    "image": {
        "$binary": "",
        "$type": "0"
    },
    "createdDate": {
        "$date": "2020-07-
07T17:37:06.924Z"
    },
    "__v": 0
}
```

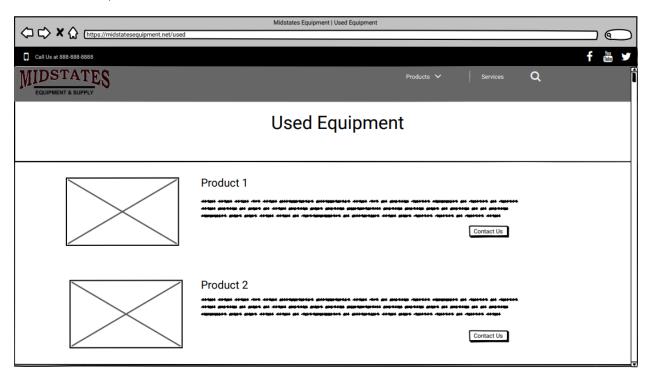

The role of the inventory document is to allow Midstates to create, read, update, and delete their inventory items for their application.

Design: Database

The user will manage inventory items on the back end

The items will update on the front end

Design: Database

note - avatar is a stretch feature

USERS

UML

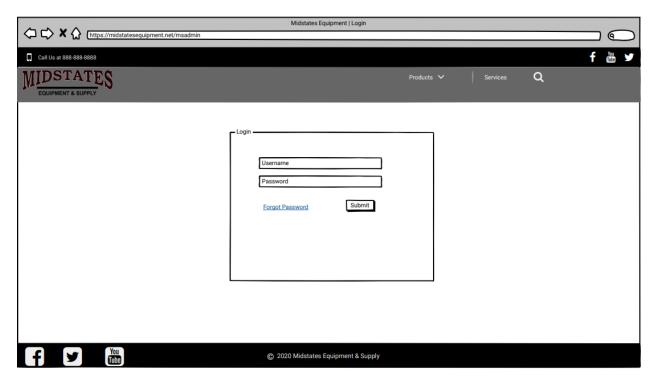

Users	(MVP)	<pre>{ "_id": { "\$oid": "5f04bded26b0a2a2749246a</pre>
_id	int	e"
firstName	string	<pre>}, "firstName": "Atlas", "lastName": "Muzzy", "email": "atlas@meow.com", "accessLevel": "Super User", "createdDate": {</pre>
lastName	int	
email	double	
accessLevel	string	
createdDate	string	
avatar	string	"\$date": "2020-07-
		07T18:24:45.653Z"
		1

Example JSON Document

v": 0,

"avatar": "/path/to/image.jpg"

The role of the users document will be for managing the users for authentication/authorization. The users will employees of Midstates managing the application. The users will be managed by the Super Admin/User.
